Syst?mes de transport

Selon les besoins du client, les systèmes de transport peuvent se déplacer sur le sol ou être accrochés à des poteaux.

- For comfortable solutions for manual installations, we recommend suspended crossbeams (cross transport).

- For automated systems, chain conveyors are most often used that do not stop and are a great solution for companies that focus on quality and repeatability of the process.

- For companies that make different items at the same time and have, for example, several cabins with different colors, flexible solutions are used with the use of a power-and-free conveyor. This is the most expensive solution.

Traversée transversale
